

AFTER CARE INSTRUCTIONS

GINACURL

CARING FOR YOUR GINACURL

After your GinaCurl hair appointment, the process isn't over just yet. The hair still needs to absorb more oxygen and will do so naturally through air neutralization.

THE FIRST 72 HOURS

Do **not** wash your hair for the first 72 hours after your GinaCurl. On the third day after your service you must wash your hair.

Once you leave the salon it is imperative that you do not brush your hair, tuck your hair behind your ears or stretch your hair in any way for 72 hours.

STYLING

- Do not wear a style that creates tension on the hair or along the hairline such as, ponytails or pulled back styles for 3 days
- No clips, pins, metal clips or clips with teeth, rubber bands, or barrette styles for 3 days.
- Do not use anything that "causes pressure" on the hair such as a tight cap, hat or scarf for 3 days.
- The hair should not be constricted in any way for 3 days after your service. This gives your hair time to become firmly established and recover.

SWIMMING

Do not swim in chlorinated pools or salt water and/or expose your hair to too much sun for at least 2 weeks after your GinaCurl. Your hair might react in a way which cannot be predicted and may revert back.

SHAMPOOING

Always use warm water when shampooing - not too hot or too cold. Please note that anti-dandruff shampoos, baby shampoos and any green shampoos may break the altered bonds of the straightened hair, allowing it to revert back to its original state.

CONDITIONING

You **MUST** wash, condition and comb through your hair with conditioner in your hair at least twice a week.

HAIR COLOR

Coloring chemically treated hair is much trickier than most people think, including hair color technicians.

AFTER CARE INSTRUCTIONS

GINACURL (CONT)

HAIR COLOR (CONT.)

Your hair might look healthy to your color technician. This is because the ends are very porous and the root area is much healthier. However, your hair has been chemically altered.

Great care needs to be taken when coloring chemically treated hair. You don't want to put permanent color on porous ends because it is too damaging.

It is imperative that you inform the color technician that your hair has been chemically altered before a color service.

We always suggest that if you have to color the ends, use a semi-permanent color for 10 minutes. We do not recommend highlights after committing to the GinaCurl.

Thank You for choosing Hair's Talent for your Straight Variation process.
Don't hesitate to call or email with any questions.
